

## **IN THE CLAIMS**

Please amend the claims as follows:

1. (Currently amended) A cleaning device (1, 1') for printing cylinders and printing plate cylinders of rotary presses comprising a guide rail (2), which is arranged generally parallel to the printing cylinder and on which a washing device (4), located on a longitudinal side of the guide rail (2) facing the printing cylinder, is movably guided, and includes at least one rotationally driven cleaning brush (8) located on an axis parallel to the printing cylinder and arranged between planes formed by a top side and a bottom side of the guide rail (2), wherein [[the]] a rotational drive (3) allocated to the at least one cleaning brush (8) is arranged in a circular envelope formed by an outer periphery of the cleaning brush, and a rotor of the rotational drive (3) is formed as a brush body.

2. (Canceled).

3. (Previously presented) Cleaning device according to Claim 1, wherein the rotational drive (3) is formed as an electric drive integrated into the at least one cleaning brush (8).

4. (Previously presented) Cleaning device according to Claim 1, wherein the rotational drive (3) is arranged at least in regions within a brush body with cleaning bristles for the at least one cleaning brush (8).

5. (Canceled).

6. (Previously presented) Cleaning device according to Claim 1, wherein the brush body is guided locked in rotation on a rotationally driven shaft (10) and displaceable or movable in a longitudinal direction.

7. (Currently amended) Cleaning device according to Claim 1, wherein the guide rail comprises ~~and/or the washing device are produced from~~ an extruded section ~~and especially from an aluminum extruded section.~~

8. (New) Cleaning device according to claim 7, wherein the extruded section is an aluminum extrusion.

9. (New) Cleaning device according to claim 1, wherein the washing device comprises an extruded section.

10. (New) Cleaning device according to claim 9, wherein the extruded section is an aluminum extrusion.
